SUMMARY

Support Engineer with experience troubleshooting applications, databases, and APIs. Skilled in log analysis, root-cause analysis, and resolving software issues across Linux environments with a strong focus on technical support and issue resolution.

SKILLS

Languages & Databases: Python, Java, MySQL

Frameworks & Libraries: Flask, Scikit-learn, Jupyter Notebook, Arduino IDE

Support & Problem-Solving: Root-Cause Analysis, Incident Triage, Escalation Handling, Client Communication

Systems & Tools: Linux CLI, SSH, Git

Networking & Cloud: REST APIs, DNS/VPN/Firewall Basics, EC2, S3, VPC

PROFESSIONAL EXPERIENCE

IT Support Engineer | NCC Directorate, Maharashtra

Dec 2025 – Jun 2026

- Resolved software, application, and system issues for a user base of 40+.
- Diagnosed root cause using system and application logs rather than guessing at a fix.
- Kept systems secure and up to date through regular patching and antivirus checks.
- Documented recurring fixes so future issues took less time to resolve.
- Integrated Minutes.ai with Claude AI to automate meeting note-taking and generate structured meeting minutes.
- Coordinated with vendors on hardware and software procurement for infrastructure upgrades.

Freelance Technical Support (Remote)

Jan 2023 – Mar 2024

- Helped clients troubleshoot MySQL database issues, from connection errors to bad queries.
- Supported users through programming and script-related problems they ran into on their own projects.
- Resolved OS-level issues alongside problems with API integrations and calls.
- Explained fixes in plain language and closed most issues in a single session.

PROJECTS

Sha News — Fake News Detection website.

- Developed a web application that classifies news articles using a machine learning model.
- Used Pandas and NumPy for data preprocessing and feature preparation, with Jupyter Notebook for model development and experimentation.
- Built a Flask frontend & backend to process user input and return predictions in real time.
- Tested and debugged application functionality to improve reliability and accuracy.

Homelab — Proxmox • Docker • Linux

- Built containerized applications and internal services using Docker, with Portainer for deployment and lifecycle management.
- Used the homelab to develop and test distributed applications, APIs, databases, and containerized software in a production-like environment.

ACHIEVEMENTS & CERTIFICATION

- Built 'Jungle Safari' system using Java and JDBC in NetBeans IDE - Top 4 Finish at DotTech Festival Hackathon (2023).
- AWS Certified Cloud Practitioner (ID: e35d233da23944a28832cd5c93296076) - Verification: Credly, AWS

EDUCATION

Bachelor of Science, Information Technology

D.G. Ruparel College of Arts, Science, and Commerce • 2020 – 2023
